Production Processes

Depending on cherries' moisture level, the factory uses (15 tons per hour) Coffee Tower Dryer to reduce cherries' moisture level upon client's consent.

Cherries are taken into two (05 tons per hour) Huller Machines for processing into green beans by removing the tougher husk & a thin layer of silver skin.

Green beans must go through (10 tons per hour) Destoner Machine to remove all stones with $\geq 98\%$ accuracy.

Production Processes

The remaining light impurities are then sorted out by the use of (10 tons per hour) Air Screen Cleaner.

The green beans are then graded by (10 tons per hour) Coffee Size Grader Machine.

Green beans are taken into (10 tons per hour) Gravity Separator for more sorting against their density.

The green beans are then sorted by color through (10 tons per hour) Coffee Beans Color Sorting Machine.

Color sorted

Un-sorted

Quality for our clean coffee beans are handled by our Q-Grader who reports to general manager for final approval.

Processing Capabilities

With our machines' capacity, our factory is capable of processing up-to 30,000 metric tons of coffee cherries and we can supply more than 17,000 tons of clean green coffee beans per year.

We adhere to industry standards and certifications, such as (ISO) to maintain the highest levels of quality control and operational excellence.

The company has 11 permanent employees and hires 60 seasonal manual labors.

Sustainability Commitment

We use electrically powered machines and modern waste disposal facilities to minimize environmental impact. We are continuously exploring new ways to improve our sustainability efforts across our supply chain.
